Public risks of AV blocking

CJ Wu & Jonathan Wilson

117 DEM reports over 184 covered days in 2025

Risk matrix

30-day chance of ≥1 event at the impact tier

Likelihood	Insignificant 1	Minor 2	Significant 3	Major 4	Severe 5
Almost certain 5	Medium	High	**H7** Very high	Extreme	Extreme
Likely 4	Medium	Medium	**H3, H6** High	**H1** Very high	Extreme
Moderate 3	Low	Medium	**H4, H5** Medium	High	**H2*** Very high
Unlikely 2	Very low	Low	Medium	Medium	High
Rare 1	Very low	Very low	Low	Medium	Medium

H1 Collision H2 Emergency obstruction* H7 Single AV blockage

H3 Transit H4 Ped/access H5 Occupant H6 Multi-AV

19.1

reports per 30 days

95% CI 15.8 to 22.9

24 min median duration

29.1% lasted ≥60 min

34 of 117 reports account for 74.3% of total logged event time

H2* uses inferred obstruction at emergency scenes.
Explicit-only: Medium (2 × 4)

Logged event time does not measure medical delay or harm. Calendar-day rates lack trip or mileage exposure.

Independent review: CJ Wu and team. Covered months: March and June–October 2025.

PUDO complaints per trip

BACKUP

2026 Q2 compared with the prior three quarters

Complaints per 100,000 trips

Prior 3 pooled rate: 1.71 per 100,000 trips

Complaints: 42, 66, 69, 79. Trips: 2.68M, 3.75M, 3.91M, 4.22M.

No clear evidence of a rate difference

Latest quarter / prior 3 pooled

RR 1.09

95% CI 0.83 to 1.43

Exact two-sided p = 0.535

The interval includes a lower and a higher rate.
This does not prove equality.
